Group Discussion Session

AY: 2017-2018

Group Discussions help to check students 'interactive skills and how effective they are in communicating with people. The GD is to check how one behave, participate and contribute in a group, how much importance do you give to the group objective as well as your own, how well do you listen to viewpoints of others and how open-minded are you in accepting views contrary to your own.

The aspects which make up a GD are verbal communication, non-verbal behavior, and conformation to norms, decision-making ability and cooperation. The following skills are required in GD

- ♦ Communication Skills
- ♦ Interpersonal Skills
- ♦ Leadership Skills
- ♦ Motivational Skills
- ♦ Team Building Skills
- **♦** Tolerance
- ♦ Clarity over Ambiguity
- ♦ Divergent Thinking
- ♦ Listening skills
- ♦ Presentation Skills
- ♦ Analytical / Logical skills

Dr. K.V.S.R. Institute of Pharmacy Opp: Dupadu R.S. N.H.-44, KURNOOL-518218 (A.P.)

Topic:

Why do doctors in public hospital prescribe medicines that are not at all available in hospital pharmacy:

The growing non-medical use of prescription drugs is a global health concern. Such usage can be defined as the taking of prescription drugs, whether obtained by prescription or otherwise, other than in the manner or for the reasons or time period prescribed, or by a person for whom the drug was not prescribed.

The real scale of the problem is unknown, due partly to lack of data on the non-medical use of prescription drugs, and partly to the existence of many gaps in the monitoring of their legal use for medical purposes as prescribed by health-care professionals (which creates opportunities for the diversion of these drugs to people to whom they were not prescribed). Most studies on and monitoring instruments for substance abuses pertain to the use of illegal drugs, or alcohol and tobacco. However, the non-medical use of prescription drugs is a unique category of substance use in number of ways and requires attention at different levels.

When patients don't take their medications as prescribed—is unfortunately fairly common, with research showing that patients don't take their medications as prescribed about half the time. The phenomenon has added consequences for patients with chronic disease. When this is the case, it is important for physicians and other health professionals to understand why patients don't take their medications. This will help teams identify and improve patients' adherence to their medications.

Debate

AY: 2017-2018

Debate is a process that involves formal discourse on a particular topic, often including a moderator and audience. In a debate, arguments are put forward for common opposing viewpoints. Debates have historically occurred in public meetings, academic institutions, debate halls, coffee houses, competitions, and legislative assemblies. Debates has also been conducted for educational and recreational purposes, usually associated with educational establishments and debating societies.

- 1. Develop excellent oral and written communication skills.
- 2. Develop excellent critical thinking skills.
- 3. Develop effective tools for research, organization and presentation.
- 4. Develop strategies to overcome fears of public speaking.
- 5. Discover the confidence and desire to participate in all academic classes.

Benefits:

- Confidence Belief in themselves and their abilities, and the desire to participate in all classes.
- Curiosity The passion of discovery through effective tools for research, organization and presentation.
- Critical Thinking How to explore the world through the lens of an inquisitive mind.
- Communication Oral & written skills and strategies for lively yet respectful discussions & disagreements.
- Control Eliminate the fears of public speaking.
- Creativity The desire to explore, create and invent.
- Camaraderie Meet like-minded peers at tournaments and build healthy bonds of competition.
- Leadership Self-motivation and the ability to delegate assignments and manage peers.

Debate teaches individuals the importance of being prepared to listen. First, it trains people in the mental preparation of listening – having a listening plan. During a debate you listen for specific things, points you want to answer, weakness in logic, supporting material and key points.

Summary

Using debates in the classroom provides students the opportunity to explore real-world topics and issues. Debates also engage students through self reflection and encourage them to learn from their peers.

Topic:

Are private schools better than government schools??

Private schools are definitely better than government schools as they would provide better infrastructure, better teacher to student ratio, have a clean & hygienic facility, provide better environment for students with options of personality development and extracurricular activities.

Government schools may not be able to offer all these features but for those who cannot afford private schools, getting their children in government schools is better than no schooling at all.

The major difference between a private school and a government school comes in the quality of the education imparted at these institutions. Apart from the basic curriculum, emphasis is also laid down to educate them about life skills including punctuality, hygiene, discipline, etc. in private schools.

Topic:

Medicine price control yes or no? A casual debate discuss.

The government controls only those drugs that are considered as life saving and don't have any generic substitutes in market. The Supreme Court has made it clear that they have an appropriate criterion that is followed strictly to keep prices under control. The objective is also to control the pharmaceutical companies who go for higher pricing just to sell their drugs outside India. Even if this move is termed as nationalization of pharma industry, it is ok, because it is the responsibility of government to keep health of citizens as their top priority.

Intentionally the physicians prescribe the patients the expensive drugs that have to be kept in check. The prices of generic drugs available in the India might be cheaper as compared to the international markets but still are considered expensive as per the Indian market.

Topic: Drug addicts should be punished

where the narcotic drug or psychotropic substance consumed is cocaine, morphine, diacetylmorphine or any other narcotic drug or any psychotropic substance as may be specified in this behalf by the Central Government by notification in the Official Gazette, with rigorous imprisonment for a term which may extend to one year, or with fine which may extend to twenty thousand rupees; or with both; and

where the narcotic drug or psychotropic substance consumed is other than those specified in or under clause (a), with imprisonment for a term which may extend to six months, or with fine which may extend to ten thousand rupees, or with both.

Studies show that drug abuse leads to **poverty and family breakdown**. According to a survey in India, weekly expenditure on drugs amounted to \$13 and total expenditure ranged between US \$250–\$25,000. In families disrupted by drug abuse, poverty is often transmitted from parents to children. A debate "**Drug addicts should be punished**" on was conducted on 24/11/2018 and the students of B Pharmacy have actively participated in this session.

Open Deposition of 44,

Topic:

Cost of treatment at private health care centre should be capped too:

The corona virus pandemic has served to rewrite the priorities of the country's healthcare system. The surge in the number of cases and the lopsided nature of the medical facilities available, where the government sector is woefully inadequate while the private sector is mostly beyond the reach of the majority, have meant a resetting of the strategy by seeking to make the treatment affordable.

Private hospitals, on their part, have maintained that the capping of the cost is unfair as it also means treating the underlying co-morbidities. The focus has to be on clinical outcome, not just the cost. The high cost of treatment in private hospitals has also been ascribed to the health cess imposed in this year's Budget on the import of medical equipment which most private hospitals do to provide specialised healthcare. Actually, therefore, the initiative to put a cap on the cost of treatment should have come from the Centre itself, instead of leaving it to the states.

Topic:

Does social media affect teenager??

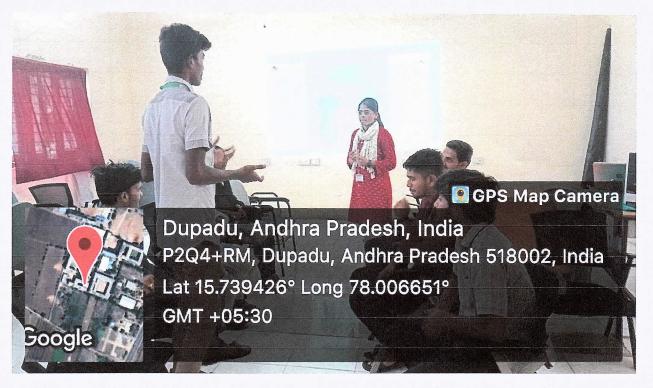

In this 21st century, with the advancement of technology, the internet is available to everyone, no longer being confined to metropolitan cities or internet cafes. It has crossed the threshold and is available at our fingertips. With the spread of the internet, there is a rise in the use of social media and specially there is a hike in usage by teens. Though there is an age limit provided by some of these social media platforms but there is no hard and fast rule and by just altering your birth year, you're good to go.

Using Social media has its own set of pros and cons. They affect a child in both positive as well as negative ways. There is an ongoing debate about whether or not high school goers should be allowed to use social media. But, the harsh truth is that it is beyond our control. So we have to

digest the fact that teens will use social media even if we don't want them to. However, social media use can also negatively affect teens, distracting them, disrupting their sleep, and exposing them to bullying, rumor spreading, unrealistic views of other people's lives and peer pressure. The risks might be related to how much social media teens use.

A debate on "Does social media affect teenager??" was conducted on 15/06/2019 and the students of CSE branch have actively participated in this session.

Steroids should be accepted in sports. Discuss about it.

Most serious athletes feel a strong drive to win. They often dream big too. Some athletes want to play for professional sports teams. Others want to win medals for their countries. The pressure to win leads some athletes to use drugs that might give them an edge. These are called performance-enhancing drugs. Use of these drugs is known as doping.

But doping comes with risks. Learn more about the effects that performance-enhancing drugs can have on health.

Anabolic steroids are drugs that athletes take to boost their strength and add muscle. These drugs also are called anabolic-androgenic steroids. They are made to work like a hormone that the body makes called testosterone.

Testosterone has two main effects on the body:

Helps build muscle.

Principal / Correspondent

Date :

• Causes features such as facial hair and a deeper voice.

The anabolic steroids used by athletes are often forms of testosterone made in a lab.

Some people use anabolic steroids for medical reasons. But doping for sports isn't one of the uses the drugs are approved for.

These drugs might lower the damage that happens to muscles during a hard workout. That could help athletes bounce back faster from a workout. They might be able to exercise harder and more often. Some people also may like how their muscles look when they take these drugs.

More-dangerous types of anabolic steroids are called designer steroids. Some drug tests may not be able to spot them in a person's body. Anabolic steroids have no medical use that's approved by the government.

Debate

AY: 2020-2021

Debate is a process that involves formal discourse on a particular topic, often including a moderator and audience. In a debate, arguments are put forward for common opposing viewpoints. Debates have historically occurred in public meetings, academic institutions, debate halls, coffee houses, competitions, and legislative assemblies. Debates has also been conducted for educational and recreational purposes, usually associated with educational establishments and debating societies.

- 1.Develop excellent oral and written communication skills.
- 2.Develop excellent critical thinking skills.
- 3. Develop effective tools for research, organization and presentation.
- 4. Develop strategies to overcome fears of public speaking.
- 5. Discover the confidence and desire to participate in all academic classes.

Benefits:

- Confidence Belief in themselves and their abilities, and the desire to participate in all classes.
- Curiosity The passion of discovery through effective tools for research, organization and presentation.
- Critical Thinking How to explore the world through the lens of an inquisitive mind.
- Communication Oral & written skills and strategies for lively yet respectful discussions & disagreements.
- Control Eliminate the fears of public speaking.
- Creativity The desire to explore, create and invent.
- Camaraderie Meet like-minded peers at tournaments and build healthy bonds of competition.
- Leadership Self-motivation and the ability to delegate assignments and manage peers.

Debates teaches individuals the importance of being prepared to listen. First, it trains people in the mental preparation of listening – having a listening plan. During a debate you listen for specific things, points you want to answer, weakness in logic, supporting material and key points.

Summary:Using debates in the classroom provides students the opportunity to explore real-world topics and issues. Debates also engage students through self reflection and encourage them to learn from their peers.

Topic:

Legalise the sale of human organs

Legalisation of the sale of organs will eliminate the corruption that has led to reported executions and 'thefts' of organs. A successful transplant operation is dependent upon knowledge of certain characteristics of the donor. Therefore the origin of the organ must be known. The black market cannot be regulated, but its purpose would be defeated once the sale of organs became lawful.

Date :

Legalising may increase the number of lives saved but it will also lead to further social division. The poor will sell their organs more because of their need for money but will not be able to buy organs if they need. It will act like a double-edged sword. They could benefit if someone donated the required organ.

A debate on "Legalise the sale of human organs" was conducted on 28/08/2020 and the students of B PHARMACY have actively participated in this session.

Think Pair Share Session

AY: 2020-21

Think-Pair-Share (TPS) is a cooperative learning activity that can work in varied size classrooms and in any subject. Instructors pose a question, students first THINK to themselves prior to being instructed to discuss their response with a person sitting near them (PAIR).

In other words, Think-pair-share (TPS) is a collaborative learning strategy where students work together to solve a problem or answer a question about an assigned reading. This strategy requires students to (1) think individually about a topic or answer to a question; and (2) share ideas with classmates. Discussing with a partner maximizes participation, focuses attention and engages students in comprehending the reading material.

- It helps students to think individually about a topic or answer to a question.
- It teaches students to share ideas with classmates and builds oral communication skills.
- It helps focus attention and engage students in comprehending the reading material.

Group Discussion Session

AY: 2021-2022

Group Discussions help to check students 'interactive skills and how effective they are in communicating with people. The GD is to check how one behave, participate and contribute in a group, how much importance do you give to the group objective as well as your own, how well do you listen to viewpoints of others and how open-minded are you in accepting views contrary to your own. The aspects which make up a GD are verbal communication, non-verbal behavior, and conformation to norms, decision-making ability and cooperation. The following skills are required in GD

- ♦ Communication Skills
- ♦ Interpersonal Skills
- ♦ Leadership Skills
- ♦ Motivational Skills
- ♦ Team Building Skills
- ♦ Tolerance
- ♦ Clarity over Ambiguity
- ♦ Divergent Thinking
- ♦ Listening skills
- ♦ Presentation Skills
- ♦ Analytical / Logical skills

Topic:

Animals should not be used in medical research:

Imprecise results from animal experiments may result in clinical trials of biologically faulty or even harmful substances, thereby exposing patients to unnecessary risk and wasting scarce research resources. Animal toxicity studies are poor predictors of toxic effects of drugs in humans.

Animals should not be used for biomedical research because the experiments are cruel and inhumane. Although animal testing brings more medical advancement and less human-based experiments, it is an expensive way of researching that produce imprecise outputs and at the same time is a practice of animal cruelty.

Topic:

Are books better than television?

All the research says reading a book is good for you. Better even than listening to an audiobook or reading one on an e-reader. It reduces stress, promotes comprehension and imagination, alleviates depression, helps you sleep and may contribute to preventing Alzheimer's. Reading is active; watching TV is passive.

Reading has a positive effect on our mental health, while watching TV has the exact opposite effect. Reading can reduce stress, lower our blood pressure, our heart rate and muscle tension. On top of the knowledge boost reading provides us with, it also has a healing effect on our mental state.
